

You must hand write all of your answers!!!

1. What are electron carriers?
2. What are the 4 steps of aerobic cellular respiration?
3. What is decarboxylation?
4. What is substrate level phosphorylation?
5. What is the final electron acceptor in the electron transport chain (ETC)?
6. Where does glycolysis occur?
7. Where does pyruvate oxidation, citric acid cycle and oxidative phosphorylation happen in eukaryotic cells?
8. How many ATP are produced in anaerobic respiration?
9. How many ATP are produced in aerobic respiration?
10. Using my diagram, draw your own diagram of the aerobic cellular respiration process. Use the back of this page.
